Ba
773 tools and the throwing weapon were made. Then, unfired pottery and weaving were invented; and men finally came to know stone tools, iron and the forge. The technique of making dwellings seems to have developed more slowly.

a. Fishing

Ba
Bo
226
463 Side by side with populations who specialize in the art of fish-
564 ing, such as the Bozo or the Somono caste, all the Bambara fish in the [96] rivers or watercourses in the neighborhood of their dwellings. A detailed study has been made by J. Daget (1). The Somono, who

1. Jacques Daget, "La pêche dans le delta central du Niger" [Fishing in the Central Delta of the Niger], Journal de la Société des Africanistes, Vol. XIX (1949), No. 1.

are the caste of Bambara fishermen, use traps and nets for fishing; the Bozo remain faithful rather to harpoons and small nets. They are
Ba the ones who almost always make the pirogues, for they alone may
Bo enter in rapport with the spirit of the water, Faro. The nets are of
286 knotted mesh made with a weaver's shuttle, sia, and a cylindrical
227 mold, pako. The band of the net, as it is being made, is nearly always attached to a wooden bridge especially conceived for this purpose, the kale or dio soyo kala, a regular tetrahedron whose edges
Ba are about 20 centimeters long, one of which is prolonged by a handle
Bo 1.50 meters long. The fisherman, seated on the ground, puts the
[283 bridge before him, keeping the handle close to his leg. The fibers
824 used in netmaking are da (Hibiscus cannabinus), kie (Figna unguiculata), cotton, and now European thread.

Bo The Bozo construct weirs from cut and joined tree branches;
226 the weirs assume several different forms according to the regions and
Bo the snares used. Fish are used for human consumption; they are eaten
●Ba fresh, grilled, fried or boiled, or preserved by smoking or drying. Oil,
●251 used for cooking and as a lubricant, is extracted from certain fish,
252 such as the tineni.

Ba Fishing in Bambara villages is done communally under the
226 direction of a fishing chief at the time the waters recede. Precise rules of fishing rights and of rents due the masters of the waters are respected everywhere.

342 shovel. A coping of bricks is then laid out around the roof, leaving room for the gutters which spill into the streets. These houses may be topped with a second roof, a thatched cone. The four chief timbers are set at the four angles of the house. There is a door in the first ceiling, and precious goods or objects are kept in this part of the house. As in the round huts, the door always opens to the south.

[237] The outside of the houses are plastered with earth mixed with cow dung; on the inside, the floor and lower part of the walls are daubed with black earth mixed with fresh cow manure and bark from [824] the jumbo tree (Napoleona Heudelotii); the upper walls and the ceiling are covered with white river clay. Where the two colors meet, [531] lines of festoons traced with the finger symbolize the descent of the third Word. On the white walls are painted ladders, calabash spoons, animsla, signs conveying [102] the worldly situation of the owner as well as the soul of the artist.

[356] The periphery of the entrance door is daubed with fresh cow [749] dung every 15 days, and more liberally with rotted cow dung once a year before the rains. This custom is linked to ancestor worship.

Canari [earthenware vessels] containing certain plants are 353 buried under the bed of the head of the family; other plants and 352 juice from roots are hidden under the women's beds. The boli are hooked to the roofing of the houses for they must touch neither earth, water, nor fire. Nets, diakumadjulu, are hung from the ceiling; they hold clothes or calabashes for the food; mats or animal skins are spread on the ground; beds, different-sized calabashes, and stools complete the furnishings. The different huts belonging to one family 351 are surrounded by a wall that opens into the vestibule of a hut with 342 two doors, oriented north-south. This is where the head of the family receives strangers. In the inside court are found hearths made [354] of three stones, mortars for millet, and chicken coops, a sort of small square hut made of clay mixed with straw. The granaries, 343 constructed on piles, have the form of round huts. They are divided 251 into four parts, where the four principal grains are kept: millet, rice, fonio, ground nuts. Some grains may be kept together in the same compartment, for example, millet and ground nuts. Certain granaries, bonio, are veritable cigar-shaped pots made by the blacksmiths' wives. When the bonio is finished, it is cut into sections

343 which are dried. Then it is reassembled without sealing the pieces
251 together, and as the level of the provisions goes down, the unnecessary sections are taken off. The kitchens are situated to the west of the rooms.

Arrangement of the huts in a concession. The chief's hut is
342 always to the east, for he must see the sun rise. His hut is often
361 quadrangular and has several rooms. The women's huts are generally round; each has its kitchen situated to the west and closed by a separate lock. Private shower rooms are reserved for husbands and
[514] wives. Privy cabinets with two holes, one for urine and one for stool, are stopped up and condemned when they are full.

312 Finally, the well is sunk in the middle of the court or else in the immediate proximity of the concession. Water is drawn directly with a calabash fixed to a long rope.

342 Sometimes individual huts are constructed on piles for protection against mosquitoes at night; the only opening is a trap door in the floor by which the hut is entered.

g. Tombs

764 An old custom had the family heads buried in their huts. The Fama were buried in the courts of their fortified palaces, to the northwest. Babies were buried near their mothers' huts, for their return was awaited. At the present time the Bambara are buried in cemeteries following Moslem or animist custom.

[767] [103] The brotherhood priests dig the graves; tombs may be individual or collective. Monteil (Les Bambara du Ségou et du Kaarta [The Bambara of Ségou and Kaarta]) describes a chief's tomb: the vault has the form of a parallelepiped; the lower base is one meter wide and two long, the upper base three wide and two long, and a vertical partition of 1. 50 meters forms a right angle with the bases.

In Ouassoulou the custom was to dig a common tomb of several chambers for the whole family. A square entrance about two meters high and two wide led into a narrow corridor that opened on a first chamber reserved for children; another corridor connected the first chamber with a second, larger one reserved for women and for adult males; from this a third corridor led to a last chamber, a smaller one for heads of the family. An oil lamp was placed at the
